Pflegedienst Sonnenschein
Für Sie vor Ort!

Ambulante Pflege und Betreuung:
Wir bieten Ihnen Hilfe:
- bei der Grundpflege z.B. Hilfe beim Waschen oder Baden.
- bei der hauswirtschaftlichen Versorgung z.B. Reinigung des Wohnraums, Einkauf usw.

Der Pflegedienst Sonnenschein bietet auch Unterstützung für die Angehörigen an. Durch die Verhinderungspflege (§ 39) und den zusätzlichen Betreuungsleistungen (§ 45b), die stünden-, oder tageweise zu Hause in Anspruch genommen werden können, kann der Patient qualitativ sehr gut betreut werden und der Angehörige findet so Entlastung.
Gerne übernehmen wir auch Pflegeberatungseinsätze bei Geldleistung (2 – 4 mal jährlich) und vermitteln Ihnen einen Hausnotruf, mit 24 stündiger Rufbereitschaft.

Tagespflege:

24 Stunden Betreuung:
Die Alternative zum Pflegeheim ist eine 24-Stunden-Betreuung zu Hause. Gerne sind wir Ihnen bei der Vermittlung einer Betreuungskraft behilflich.

Vertrauen Sie auf unsere Erfahrung und informieren Sie sich kostenlos!

Dear Patient,

Welcome to Weiden Hospital. We know that your hospital stay constitutes a change in your daily routine. This brochure serves to familiarize you with your new environment, especially in the first few days.

As our patient, you are of course at the heart of our everyday work. We have a lot of medical disciplines under one roof, which means that we can offer you quick and interdisciplinary care. Professional qualified and experienced staff, state-of-the-art diagnostic equipment and treatment help safeguard your recovery and maintain your health.

Thank you for putting your trust in us, and we wish you a rapid recovery.

Yours,

Josef Götz
Director
With almost 1,800 employees and 649 beds, 14 specialist units, nine specialist centres, one medical care centre and two affiliate departments, we are a strong partner for your health. We have over 26,000 inpatients a year and treat over 43,500 people a year as outpatients. As a centre of expertise within the Kliniken Nordoberpfalz AG, we provide local and modern medical care in the region. We are a designated specialist care level II facility and we work closely with the University Hospital of Regensburg in our role as a teaching hospital.

You're in good hands with us

Our work focuses on providing the best possible medical care and respect for our patients. This holistic approach, which encompasses the individual's physical, psychological and social needs, is one that we practise every day in our hospital. To help us do this, we remain receptive to new developments in patient care and medical science and we are constantly improving our skills. Our treatment, nursing and support concept is holistic and coordinated on a patient-by-patient basis. We regard our profession as a social mandate that we want to help shape and define. As a result, we always provide high-quality treatment and care in a friendly setting and have a positive, obliging attitude towards our patients and their relatives.

You can find out more about us here!

Our patient information tells you even more about the Kliniken Nordoberpfalz AG. This is provided in your patient folder.

www.kliniken-nordoberpfalz.ag
We want you to feel at home with us. So we're here for you right from the start. Over the next few pages, we have put together all of the key information for you: from arriving to admission and optional services. The "A day with us" section also tells you more about what happens on our wards.

How to get to our hospital

Parking spaces
Visitors can park free for 30 minutes in our underground garage and on the car park on the Augustinergelände. Otherwise the usual local parking charges are levied.

Bus (public transport)
If you are planning to arrive and leave by bus, we recommend using Line 1. It stops just by the hospital. Stops can be found on the Sebastianstrasse, near the Courts of Justice, and on the Gabelsbergerstrasse (Klinikum/Stadtfriedhof). The hospital is just a few minutes' walk from there.
Admission

As an inpatient
The team in the admissions department on the first floor is your first point of contact in our building. To register you as a patient, we will require some information as well as your doctor’s referral letter and your health insurance card.

As an outpatient
If you want to be treated at our facility as an outpatient, please arrange an appointment in the relevant specialist clinic with one of our secretaries. They will also be able to advise you which treatments will be covered by insurance funds.

In an emergency
In our emergency department, we provide 24-hour care to patients with acute injuries or conditions. The entrance for stretcher cases is via the Söllnerstrasse. Patients are registered in the central admissions department on the first floor. We deal with paediatric emergencies directly in our paediatric department. This can be accessed via the main entrance on the Söllnerstrasse.

Labor and delivery
Patients who are about to give birth should contact our reception team directly.
Hospital hostesses

To make finding your way around easy, our hospital hostesses are available as a special service, ready to assist you as soon as you are admitted. Our staff will be on hand to offer practical advice to ensure that you feel at home straight away. They will escort you to the ward and will be happy to provide you with any other information you need.

Private health care service

In addition to general hospital services, we also offer you the option of arranging other special services and comfort services with us. These will be charged separately and on a contractual basis between the patient and the hospital. Statutory health insurance funds do not usually cover optional services. Please therefore seek advice beforehand regarding which services are covered.

Supplement

For inpatient admissions, the insurance companies require a supplement of Euro 10 per day for a maximum of 28 days per calendar year. You can pay this at our reception. We will then forward your supplement to the insurance fund.

<table>
<thead>
<tr>
<th>Hospital hostesses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monday to Thursday</td>
</tr>
<tr>
<td>Friday</td>
</tr>
</tbody>
</table>

Optional services

The comfort services we offer include:

- Accommodation in single and twin-bed rooms
- Wider choice of food and drink
- Extended services or assistance
- Accommodation and provision of food and drink for a companion

Supplement

The supplement does not have to be paid by:

- Patients under the age of 18
- Patients receiving obstetric care
- Patients who have suffered accidents in the workplace
- Patients with private insurance
A day with us

The day on our ward begins at around **06.30 am**. As well as waking patients up, the nursing team will make up beds, provide assistance to physically incapacitated patients with their daily ablutions and will also change dressings.

The ward staff will bring breakfast to your room at **around 08.00 am**. We then prepare patients for any investigations they are due to have and order any medicines for the following day.

Lunch is served at **around 11.15 am**. If you are not having any further investigations in the afternoon, you will have sufficient time to receive visitors or to rest.

At **around 01.30 pm**, we come round with tea and coffee. We carry out further nursing duties in the afternoon.

We bring round your evening meal at **around 05.00 pm**.

The ward winds down for the night at **09.00 pm**. We are of course also available during the night should you need anything. Simply press the patient call bell.
After admission, all of the formalities are complete. You now have time to settle yourself in your room, choose your menu for the following day and to get your bearings. If you have any questions, or you would like more information, please contact the ward staff. They will be happy to assist you.

Room Furnishing and Accessoires

Our rooms all have modern facilities and are mostly equipped with their own wet room (WC and shower). Every room has a telephone, radio and TV. Our coffee and tea bar on the ward can also be used free of charge in an afternoon.

House rules

We want our patients to be able to recover in a calm and peaceful environment. We therefore ask you to take a moment to consider our house rules. You will find the full list of our house rules in the information folder in your room. It includes notes on separating waste, smoking and alcohol, etc.
Meals

A balanced and varied diet can make a big difference to your health. Our kitchen chef and his team use only high-quality products, primarily sourced from our local area, in the preparation of your meals.

Kitchen hostesses

Our kitchen hostesses are the link between the kitchen and our patients. They come and visit you every day and note down your meal choices. We offer you a wide choice of breakfast, lunch and evening meals. You can either put together a dish yourself or choose one of the suggested dishes from our menu of the day.

Kitchen direct dial

Telephone: +49 (0)961 303-2957
Your stay

Telephone, radio, TV

We know that your time in hospital can pass very slowly. This is why we offer you a range of entertainment media. Directly next to your bed is our control system used to operate the telephone, radio and TV. The brochure in your night stand will explain how they all work. Here are the essentials at a glance.

How to use

The TV and telephone are used with a special chip card. These can be obtained for a deposit at the reception desk or from patient admissions. You can then load your required sum onto your card at one of the card machines or at reception. When you return your chip card to us, we will give you back your deposit and any credit you have left on the card.

Costs

All radio channels are free for you to listen to, even without a chip card. The telephone and TV can be used for a daily flat-rate fee. This fee includes unlimited calls to the German land line and to D1, D2, E-Plus and O2 providers. Our TV package offers over 20 TV channels, including six Sky channels.

<table>
<thead>

</tbody>
</table>
Internet

You can surf free of charge on your WLAN-enabled devices in virtually all patient rooms, in the entrance hall and in the café. If you have any questions or need assistance, please contact our reception staff.
Stoma advice

Artificial stool or urine drains are a sensitive procedure and often cause psychological stress. We support and advise you on how to cope with your stoma and show you how to look after it. Our stoma therapist works closely with doctors, nursing staff and the social services team to do this. If you wish, we can of course also provide your relatives with tips and information about personal hygiene and how to care for your stoma. Our counselling department will also discuss sensitive matters with you.

Paediatric follow-up

If a child is born prematurely, is chronically ill or has been seriously injured in an accident, the lives of the affected family are changed dramatically. The Paediatric Follow-Up Department offers the families of such children holistic and personal support during and after their stay in hospital. As part of the transfer of care, we strive to achieve as smooth a transition as possible between inpatient treatment and outpatient care.

Together with the 'Bunter Kreis Nordoberpfalz' organisation, we have an interdisciplinary team on hand to provide the best possible support to the family.
Expert nurses

Specialist oncology nurses:
For those affected and their families, a diagnosis of cancer is a huge source of worry. As oncology specialists, we provide support and we are the first port of call for any questions you may have. We can provide information about how diagnostic procedures and treatments are carried out and we arrange nursing care. We are here for you even after you have left hospital.

Specialist breast nurse
As experts in conditions affecting the breasts, we act as companions and contacts for women with breast cancer. We support patients by always being there for them and through close contact - from the moment the diagnosis is made to their return to everyday life. We want to make sure you are involved in your treatment, helping to determine what happens, and we do this by providing you with comprehensive explanations and advice.

Breastfeeding advice
To ensure that breastfeeding mothers and their babies get the best advice right from the start, our paediatric nurses have undergone further training to become breastfeeding advisers. They support women after the birth on the ward and, after discharge, provide an opportunity for them to obtain advice twice a month at our "Breastfeeding Café at the Hospital".

Wound care management

Modern wound care allows wounds to heal in a shorter space of time. This requires a lot of specialist expertise: as well as wound monitoring, wound genesis and wound diagnosis, the choice of dressing, careful hygiene and the patient history also have a role to play. Our ICW wound expert will be happy to advise you on the care options available.

Nutrition consultation centre

With some conditions, a change of diet can have a positive influence on your recovery. Following a prescription from your doctor, we will be happy to arrange an appointment for you with our dietician. Relatives and contacts are also welcome to come with you. We offer you advice on how you can change your eating habits.

Diabetes advice

A healthy lifestyle, the right diet and the right dose of medications are crucial for patients with diabetes: In our advice centre, we explain the condition, the possible secondary conditions that can occur and the treatment methods used. Of course we also offer special educational courses. You will need a referral note from your GP for these.
Health problems and associated inpatient stays can result in changes to everyday life that are sometimes temporary but often permanent. Kliniken Nordoberpfalz AG offers its patients not only the very best care, but also the ability to seek help with managing such changes. Patients can expect practical support from the staff in the "Patient coordination" department. In some departments, invitations and ward allocations are already handled by our department.

During your stay in hospital, consultations are held with the patient and their relatives in which the patient's individual care needs after hospital are discussed. On the basis of this assessment and while respecting the patient's wishes, our staff coordinate the patient's discharge so that the patient only has to focus on one thing: getting better.

### How to find the patient coordinators

We’re here for you

Patient contact point

We want you to feel at home with us. So we’re here for you, whatever you need. Please don’t hesitate to ask your nursing staff or doctor if you are unclear about something. You are also welcome to contact one of our staff in the patient enquiries centre.

Patient affairs

A harmonious and peaceful environment has a positive effect on your recovery. So it is especially important for us to find out if something is upsetting or annoying you. In such an event, please let us know: we will get to the root of the problem and find a solution together.
Patient advocates

You are also welcome to contact our patient advocates with any requests you may have. Mrs Walter and Mrs Albert work as volunteers. They are not answerable to the hospital.

Your opinion counts

We would be grateful if you could fill in our patient questionnaire. You can drop the questionnaire off at reception in the enclosed envelope. You may be contacted by a third party following your stay in hospital to rate us and our services. You may also want to share your opinion of your stay with us on one of the many comparison portals.

We would welcome your feedback and comparison with other hospitals - and of course any critique and suggestions you have to offer. But we would also be delighted if you rate our services highly because you were happy with your stay. This is because it is only through positive and critical feedback that we can get a coherent overall picture of our hospital and its services.

Patient advocate

Elisabeth Walter

Ground floor, Room 10.01

Pastoral care

A stay in hospital is often associated with anxiety, worry and fear, questions and hopes. An operation or serious illness can have a huge impact on the everyday life you are used to. If you are looking for spiritual support during this time, our Catholic and Protestant counsellors are here to help.

**Catholic Holy Mass:**
- Monday, Wednesday, Friday  04.00 pm
- Saturday   07.00 pm
- Sunday   08.30 pm

On Monday, Wednesday, Friday and Sunday after mass there is **communion** for patients confined to their rooms.

**Protestant service with Eucharist**
- Saturday   04.00 pm

**Eucharist** for patients and **blessing of the sick** on request at any time on the ward.

All services held in the hospital chapel are broadcast via your TV (TV channel 3). It can be watched free of charge without a chip card. You can contact our hospital counsellors via the nursing staff and the hospital reception desk.
"The little that you can do is a lot"
Albert Schweitzer

Förderverein für Schwerkranke
(Support organisation for seriously ill people)

The Förderverein für Schwerkranke organisation is responsible for people in the region and supports the outpatient and inpatient treatment of patients with serious and chronic illnesses. In line with the ideas of Albert Schweitzer, its members regard it as their ethical and moral duty to make a contribution towards widespread, exceptional and unconditional care given especially to seriously ill people.

Effective explanations, information and follow-up are intended to ensure that all patients from the region receive holistic care. The funds are used to provide modern medical equipment and to improve infrastructures, as well as to provide doctors and nurses with further training. With your donation, you are also safeguarding assistance and support for those affected and their relatives as they come to terms with the burden of the condition. So you see, with a donation to the Förderverein, you too can do something for seriously ill people.

Donations account:
Sparkasse Oberpfalz Nord
Account No.: 105 841
Sort code: 753 500 00

More information about the Förderverein für Schwerkranke can be found on our website: www.schwerkrankenfoerderverein.de
Within our hospital, we offer you a range of additional services. Over the following pages, we show you where to enjoy a nice cup of coffee in peace or where you can find reading material, as well as a wealth of other things.

Cafeteria and kiosk

Fresh fruit, tasty drinks, interesting magazines, small snacks, elegant bouquets of flowers and gifts can be found in our kiosk on the ground floor. Directly next door is our cafeteria, which has space for 90 people and is the ideal place to spend time chatting over coffee and cake. Our range of home-made cold and hot dishes may surprise you.

<table>

Holy Communion for the sick / blessing of the sick on request at any time on the ward
How to adjust!

ATM

Since we cannot accept any liability in the event of loss, we recommend that you do not bring any large sums of money into hospital with you. If you need cash, you can obtain it at any time in the foyer - not far from reception - using the ATM provided by the Stadtsparkasse Weiden.

Cash desk

Please be aware that we can only accept cash payments at the reception desk on the ground floor. This is where you can pay supplements such as the hospital daily allowance, for example.

Park

If you want a little fresh air, take a stroll round our garden with its own children's play area. Please let your ward staff know beforehand if you are planning to leave the ward for a while. For health and safety reasons, you should not leave the grounds of the hospital while you are still receiving treatment.
Post

A letterbox can be found in the entrance hall for any post you may wish to send. Stamps can be purchased from the kiosk. If you wish to receive post in hospital, you should tell relatives and acquaintances which ward and which room number you are in, as this will help us deliver the post to you more quickly. We deliver any mail you receive every day in the morning (except on Sundays and public holidays).

Visitors

Our visiting times are very flexible. Please be aware, however, that having visitors can be quite a strain for you and your fellow patients, especially if visitors come in groups and stay for a while. For medical reasons, it may be necessary for us to restrict visiting times, for example after an operation. Visits to the intensive care unit can be arranged by agreement.

Would you prefer not to have visitors? Please discuss this with your nursing staff.

Central
Emergency Admissions

Head Physician Dr. med. Andreas Dauber
Specialist in Anaesthetics, Intensive Care Medicine, Emergency Medicine, Quality Management

Dr. Andreas Dauber has been in charge of the interdisciplinary admissions and emergency admissions unit since 2011. We accept patients with injuries following accidents (e.g. multiple trauma), accidents in the workplace, acute conditions of the abdominal organs, the vascular or cardiovascular system, the respiratory system or the kidneys. We also accept patients with neurological conditions and diseases of the metabolic systems, hormone-producing organs (thyroid, etc.) or the venous vascular system (thromboses). Our department is open for all emergency patients 24 hours a day. Our patients are generally referred by their GP or specialist - and in an emergency also by the emergency doctor. In cases of severe or life-threatening illness, we will of course admit patients at any time without a referral.

Senior Physicians in the Central Emergency Admissions Unit

Dr. med. Bernhard Bäumler (Specialist in Surgery and Trauma Surgery)
Dr. med. Klaus Endres (Specialist in Surgery, Trauma Surgery and Emergency Medicine)
Dr. med. Roman Wijenayake (Specialist in General Medicine)
Andreas Muck (Specialist in General Medicine and Specialist General Medical Intensive Care Medicine)
Dr. med. Christina Eibel (Specialist in General Medicine and Palliative Medicine)
Alexander Harsch (Specialist in Surgery and Trauma Surgery)
Stefan Reutemann (Specialist in Surgery)
The Central Patient Admissions and Emergency Admissions Unit can be contacted at any time

Telephone: +49 (0)961 303-4100
Fax: +49 (0)961 303-4099
E-mail: andreas.dauber@kliniken-nordoberpfalz.ag

Diagnosis and emergency treatment

- Initial examination
- Emergency treatment
- ECG, X-rays, CT and MRI scans, ultrasound, laboratory work and so on following:
  - Injuries/after accidents (including multiple trauma = patients with multiple injuries, seriously injured patients), accidents in the workplace
  - Acute conditions of the abdominal organs (gastrointestinal tract) and the vascular system
  - Conditions of the cardiovascular system
  - Conditions of the respiratory system
  - Conditions of the kidney
  - Conditions of the metabolic system (diabetes mell.), of the internal organs (bleeding, inflammation, etc.), the hormone-producing organs (thyroid, etc.), the venous vascular system (thromboses)
  - Neurological conditions
Head Physician Dr. Jürgen Altmeppen is in charge of this specialist department at Weiden Hospital. Since anaesthesia is a major and unfamiliar procedure, we take the time to discuss it in advance with the patient. We have at our disposal all of the modern methods used in general anaesthesia and the full range of regional anaesthesia techniques that are used close to the spinal cord. During the operation, the anaesthetist monitors the patient's vital functions, ensures they are free from pain and makes sure they are positioned correctly. After the operation, the anaesthetist monitors the patient's recovery and provides assistance to the wards when required on matters relating to pain therapy. A 24-hour staff rota ensures that anaesthetic doctors and nurses are always able to play their role in ensuring the best possible care for seriously ill patients on the surgical intensive care unit.

Senior Physicians of Anaesthetics and Surgical Intensive Care

Dr. med. Marcus Bachfischer (Deputy Clinical Lead, Senior Consultant)
Dr. med. Peter Betz
Ilona Boccali (Chief Resident, Training)
Dr. med. Bernhard Böckels (Intensive Care Medicine Training)
Dr. med. Beate Hagn (Executive Resident)
Dr. med. Peter Hieber (Transfusion Specialist)
Dr. med. Roland Hofmann
Dr. med. Florian Neuhierl (Consultant, Head of the Emergency Medicine Directorate, Quality Management)
Specialist areas of treatment

- All modern general and regional anaesthesia techniques
- Pre-operative anaesthetic investigations
- Acute pain service
- Surgical intensive care medicine
- In-hospital and outside-hospital rescue medicine

Head Physician Prof. Karl-Heinz Dietl has been in charge of Weiden Hospital's Department of General, Thoracic and Abdominal Surgery, which has 80 beds, since 2006. We treat patients with conditions of the digestive organs, the endocrine glands, the lungs and the pleura using open and minimally invasive techniques. Every intervention is preceded by an in-depth consultation and a thorough physical examination. The doctors then decide which additional investigations may be required in order to optimise the outcome of the operation. We also carry out standard operations on new-born and premature babies with subsequent intensive care. As well as planning surgery, our doctors of course also look after patients after their operation up until their discharge.

Senior Physicians in the Department of General, Thoracic and Abdominal Surgery

Dr. med. Eva-Maria Bothe (Specialist in General and Abdominal Surgery)
Dr. med. Hans Hagn (Specialist in General and Abdominal Surgery)
Dr. med. Martin Sonnek (Specialist in General Surgery)
Dr. med. Winfried Pruy (Specialist in General Surgery, Vascular Surgery and Thoracic Surgery)
Katja Müller (Specialist in General Surgery)
Dr. med. Dieter Weck (Specialist in General Surgery)
Specialist areas of treatment

- Surgery to the entire thoracic and abdominal area
- Surgery to the thyroid gland, parathyroid glands and adrenal glands
- Major abdominal surgery (oesophagus, liver, pancreas)
- Endocrine surgery
- Minimally invasive surgery
- Colorectal surgery
- Surgery on very small children
- HIPEC, peritonectomy

The department is headed up by Dr. Thomas Neubauer-Gartzke. As well as the bed capacity available over three wards, which are very close to each other, additional treatment facilities are available on the surgical intensive care ward and in the paediatric department. Integrated into this are two orthopaedic practices and one neurosurgery practice with inpatient affiliated contingents. All in all, the centre offers 86 beds. It has been certified as a regional trauma centre in the Eastern Bavarian Trauma Network (TNO).

We have also been certified as accident insurance consultancy (DAV) and trauma centre approved by the trade association (VAV) and has applied for recognition as a major trauma centre.

In 2015, an audit was carried out on the Endoprosthetics Centre (EPZ) by the German Society for Orthopaedic Surgery (DGOC).

### Senior Physicians in the Department of Trauma Surgery, Orthopaedics, Hand Surgery and Sports Medicine

- Dr. med. Zakaria Abo-Mostafa (Senior Consultant, Specialist in Surgery, Orthopaedics and Trauma Surgery)
- Dr. med. Philipp Koehl (Executive Resident, Specialist in Surgery and Trauma Surgery)
- Ahmet Mestan (Chief Resident, Specialist in Orthopaedics and Trauma Surgery)
- MUDr. Lukas Parik (Chief Resident, Specialist in Surgery)
- Robert Drechsel (Specialist in Surgery)
Specialist areas of treatment

- Trauma surgery with multiple trauma care
- Spinal surgery
- Pelvic and acetabular surgery
- Endoprosthetics and replacement operations
- Arthroscopic operations
- Orthopaedic correction surgery with rheumatological and podiatric surgery
- Tumour surgery
- Paediatric traumatology, paediatric orthopaedics
- Hand, plastic and micro-surgery

Dr. Eberhard Müller has been in charge of our state-of-the-art department with around 40 beds since August 2005. We specialise in treating diseases of the arteries and veins, including venous ulcers, we carry out shunt surgery on dialysis patients and treat patients with chronic wounds, especially in cases of diabetic foot syndrome. The consultation is very important for us, regardless of the procedure: with the patient's input, we define the treatment concept and work in line with state-of-the-art principles. We routinely use interventional methods (such as balloon catheter dilatation, the use of vascular stents) and surgical methods or a combination of the two. Aortic aneurysms (abnormal widening of the largest artery in the body) in particular are in many cases resolved using endovascular techniques. We have a hybrid operating theatre featuring the very best equipment to help us do this. Venous conditions, especially varicose veins, are treated with the least invasive surgical approach possible, and usually as an outpatient.

Senior Physicians in the Department of Vascular Surgery

Ralf Zanon (Senior Consultant, Specialist in Surgery and Vascular Surgery)
Dr. med. Felicitas Johanning-Csik (Specialist in Surgery and Vascular Surgery)
Dr. med. Catalin Constantinescu (Specialist in Vascular Surgery)
Specialist areas of treatment

- Diseases of the arteries (narrowings and occlusions), the creation of bypasses from the patient's own veins or synthetic material, if required, to the foot
- Surgery for pathological vessel enlargement / aneurysm, especially open surgery to the abdominal aorta and endovascular surgery to the thoracic aorta in the hybrid operating theatre
- Diseases of the veins
- Surgery for varicose veins, classic technique with conservative, invaginating stripping or endovascular technique with radio-frequency ablation (VeneFit© method)
- Shunt surgery for dialysis patients
- Chronic wounds
- Diabetic foot syndrome
- Amputations

**Department of Vascular Surgery**

Department of Obstetrics and Gynaecology

Head Physician Dr. med. Albert Roßmann
Specialist in Gynaecology and Obstetrics

Head Physician Dr. Albert Roßmann is a Specialist in Gynaecology and Obstetrics and in charge of the Department of Gynaecology. Our department’s services range from prenatal screening and support during pregnancy and the birth to the treatment of gynaecological conditions and counselling and treatment for cancer. More than 1,000 children are born in our maternity unit every year. Many of them are born prematurely, and these babies are given the best chance possible of survival in our perinatal centre, which works closely with the paediatric department. In our gynaecological surgery department, we are very experienced in using all of the methods at our disposal, from state-of-the-art minimally invasive surgery (keyhole surgery) to radical tumour surgery. Our specialists are of course also able to treat prolapses and problems with incontinence (including the implantation of tapes and meshes). Another area of specialism is the treatment of conditions affecting the breast, starting with screening, continuing through surgical techniques and culminating in follow-on treatment in line with the latest guidelines.

Senior Physicians in the Department of Obstetrics and Gynaecology

Dr. med. Karl-Heinz Mark (Head of Perinatal Medicine)
MUDr. med. Michal Lovisek
Dr. med. Loay Okko
Dr. med. Dagmar Pikalek
Specialist areas of treatment

- Pre-natal screening
- Obstetrics
- Outpatient surgery
- North East Bavarian Prenatal Centre
- Gynaecological surgery
- Minimally-invasive procedures
- Pelvic Floor Centre
- Weiden-Marktredwitz Breast Centre
- Tumour surgery
- Oncology treatment
- Conservative gynaecology

Prof. Frank Kullmann is in charge of the Medical Clinic I with a total of around 90 beds. The department's main areas of focus are gastroenterology and hepatology, haematology and medical oncology. Our specialist fields also include endocrinology and diabetic medicine, as well as non-invasive vascular diagnostics, infectious diseases, rheumatology, clinical immunology and medical intensive care medicine. The diagnosis and treatment of conditions affecting the gastrointestinal tract are carried out in a state-of-the-art endoscopy suite and ultrasound centre.

Senior Physicians and Chief Residents of Medical Clinic I

Senior Consultant Sonja Pampuch (Specialist in General Medicine, Gastroenterology, Intensive Care Medicine and Diabetic Medicine DDG)
Consultant Dr. med. Jörg Schedel (Managing Consultant, Specialist in General Medicine, Rheumatology and Gastroenterology)
Consultant Dr. med. Anja Kullmann (Specialist in General Medicine and Gastroenterology)
Consultant Horst Schleicher (Specialist in General Medicine, Gastroenterology and Neurology)
Chief Resident Simona Kocher (Specialist in General Medicine)
Consultant Andreas Faltlhauser (Specialist in Anaesthetics and Intensive Care Medicine)
Consultant Alaa Eddin Harba (Specialist in Internal Medicine, Haematology and Oncology)
Chief Resident Sezer Küz
Chief Resident Adam Kornmehl (Specialist in Internal Medicine)
Specialist areas of treatment

- Gastroenterology/Hepatology
- Interventional endoscopy / ultrasound centre
- Haematology/Medical Oncology
- Rheumatology/Clinical Immunology
- Endocrinology/Diabetic Medicine/
  Non-invasive angiology
- Medical Intensive Care Medicine
- Infectious Diseases

Prof. Robert H. G. Schwinger is in charge of the Medical Clinic II, the medical intensive care unit and the intermediate care / chest pain unit. We also offer our patients 15 semi-residential haemodialysis stations. Our specialist areas include the diagnosis and treatment of diseases of the cardiovascular system, the lungs, the kidneys, of hypertension and the intensive care of medical patients. The Weiden Heart Attack Network (WHIN) has been set up for patients who have suffered heart attacks.

Senior Physicians of Medical Clinic II

Dr. med. Richard Laun (Senior Consultant, Specialist in General Medicine, Cardiology, Nephrology and General Intensive Care Medicine)
Dr. med. Heike Naser-Schuh (Specialist in General Medicine, Cardiology and Rhythm Studies)
Dr. med. Sarah Schönian (Specialist in General Medicine and Cardiology)
Dr. med. Sarah Schönian (Specialist in General Medicine and Cardiology)
Dr. med. Oliver Rasp (Specialist in General Medicine and Cardiology)
Holger Machann (Specialist in General Medicine and General Medical Intensive Care Medicine)
Jürgen Stangl (Specialist in General Medicine)
Specialist areas of treatment

Cardiology
- Diagnosis and treatment of cardiac/vascular diseases (e.g. CHD)
- Electrophysiology (EPU, ablation)
- Cardiac pacemaker implantation
- Treatment of heart failure
- TAVI (Transfemoral aortic valve replacement)
- MitralClip (interventional treatment for mitral regurgitation)

Pneumonology
- Diagnosis and treatment of pulmonary and bronchial disease
- Sleep apnoea diagnosis
- Investigation of pulmonary nodules
- Lung replacement therapy (ECMO)

Nephrology and hypertension
- Diagnosis and treatment of kidney disease
- Renal replacement therapy including dialysis
- 15 semi-residential dialysis stations

Medical intensive care medicine
- 24-hour cardiac catheter service (WHIN)
- Heart/lung machine/ECMO
- 12 ventilation stations
- 11 Chest Pain Unit stations

Dr. med. Michael Angerer has been in charge of our Neurology Department with 53 beds since January 2001. We treat the full range of neurological conditions: including strokes, multiple sclerosis and other inflammations of the central and peripheral nervous system, epilepsy, polyneuropathies, neurodegenerative conditions such as Parkinson's disease, vertigo, headaches and spinal disc prolapses in the area of the cervical and lumbar spine. Working with neurosurgeons and the interdisciplinary pain day hospital, we draw up modern pain therapy concepts for our patients. Our team also has state-of-the-art equipment for carrying out investigations, such as neurophysiology equipment, ultrasound equipment and modern imaging equipment for the brain and spinal cord. A stroke unit has been annexed to the Neurology Department since 2003.

Senior Physicians in the Department of Neurology

Dr. med. Jürgen Hahn (Senior Consultant, Specialist in Neurology: Specialising in ultrasound-based diagnosis, DEGUM trainer, Head of the Dystonia Clinic)
Kirsten Stottrop-Walch (Specialist in Neurology)
Liliya Kuznetsova (Specialist in Neurology)
Dita Tochorova (Specialist in Neurology)
Specialist areas of treatment

- Stroke Unit with ten beds
- Strokes
- Radicular symptoms
- Multiple sclerosis
- Inflammatory conditions of the peripheral and central nervous system
- Parkinson's disease and other neurodegenerative conditions
- Epilepsy
- Headache and chronic pain syndrome
- Polyneuropathy
- Vertigo
Dr. Fritz Schneble is in charge of the Department of Paediatric and Adolescent Medicine at Weiden Hospital. Clinical Lead Dr. Frank Scharnowski-Fischer is responsible for the Paediatric Pneumonology and Allergy Medicine division. Our team of nurses, therapists, doctors and psychologists make every effort to ensure that the quality of the medical diagnostic procedures and treatment is high, but also that we address the emotional and psychological needs of children, adolescents and their families. To help us do this, there are psychologists, social workers, therapists of all disciplines and a specialist aftercare team on hand. Specialist areas of interest include the treatment of premature and new-born babies, intensive care medicines, the treatment of children and adolescents with neurological conditions and the treatment of pulmonary diseases, allergies and paediatric diabetic medicine. The department also offers paediatric surgery consultations. Paediatric surgery procedures and operations are carried out on a regular basis, following which only a brief stay in hospital is required.

Senior Physicians of Paediatric and Adolescent Medicine

Dr. med. Klaus Adam (Specialist in Paediatric and Adolescent Medicine and Neonatal Medicine)
Dr. med. Uwe Maas (Specialist in Paediatric and Adolescent Medicine and Neonatal Medicine)
Dr. med. Andrea Berger (Specialist in Paediatric and Adolescent Medicine, Paediatric Neurology, Certificate in Epileptology, DGKN-Approved EEG Trainer)
Nicole Holzgartner (Specialist in Paediatric and Adolescent Medicine and Neonatal Medicine)
Specialist areas of treatment

- General Paediatrics
- Neonatal Medicine
- Paediatric Neurology
- Paediatric Pneumonology and Allergy Medicine
- Neurodermatitis
- Haemangioma therapy
- Gastroenterology diagnostic procedures
- Paediatric Ultrasound
- Psychosomatics
- Paediatric Diabetic Medicine
- Paediatric Surgery
- SPC

Outpatient appointments

Executive Head Physician Dr. med. Fritz Schneble
Paediatric Allergy Medicine and Pneumonology (Head Physician Dr. med. Scharnowski-Fischer)
Paediatric Surgery Clinic
Paediatric Diabetic Medicine (Dr. med. Stefanie Tretter)
Private paediatric neurology consultations (Dr. med. Andrea Berger)

The Department of Urology, Andrology and Paediatric Urology is led jointly by Prof. Dr. Theodor Klotz and Dr. Thomas Bschleipfer and has developed to become a specialist centre renowned well beyond the Upper Palatinate region. The services provided represent the full spectrum of urology, from screening and diagnosis to state-of-the-art treatment methods involving all conservative, endoscopic, minimally invasive and open surgical techniques. We cover diseases of the kidneys, ureter, urinary bladder and urethra, the prostate, the male sexual organs and the female pelvic floor. The treatment is always guided by the latest scientific findings and the guidelines issued by specialist urology organisations. We particularly focus on the diagnosis and treatment of oncological conditions, i.e. malignant tumours.

Senior Physicians of Urology, Andrology and Paediatric Urology

Dr. med. Jan Hradec (Senior Consultant, Deputy Clinical Lead)
Dr. med. Aleksandar Sikic (Departmental Consultant)
Dr. med. Siegfried Heida (Departmental Consultant)
Dr. med. Bernhard Schwindl (Chief Resident)

Specialists within the department: Dr. med. Monika Hagemann (Urologist), Dr. med. Zdenek Beran (Urologist)
Specialist areas of treatment

- Prostatic disease, prostatic cancer
- Tumours of the kidney, bladder, prostate and testicles
- Incontinence and pelvic floor conditions
- Urinary stone treatment, shock wave lithotripsy, endo-urology
- Paediatric urology, urogenital dysfunction
- Andrology and erectile dysfunction, prosthetics, incontinence, bladder conditions
- Genital surgery, gender reassignment

The Institute of Diagnostic Radiology, Interventional Radiology and Neuro-Radiology covers the full spectrum of modern diagnostic radiology and radiology treatment. This includes all imaging methods involving computer tomography and magnetic resonance imaging involving state-of-the-art techniques such as cardiac imaging and virtual colonoscopy. The department specialises in X-ray guided therapeutic methods. With this technique, we treat vascular disease and tumours, carry out targeted tissue sampling, drain deep abscesses and carry out pain-relieving procedures. A separate department, led by a neuro-radiologist, has been integrated to provide treatment for conditions affecting the central nervous system and peripheral nerves. Working closely with the Department of Neurology, patients who have suffered an acute stroke are treated here. The separate "Local Tumour Therapy" unit, under the leadership of Consultant Stephan Lenhart, was established in 2015. In addition to inpatients, we also treat patients who have been referred to our private outpatient clinic.

**Senior Physicians in the Institute of Diagnostic Radiology**

- Dr. med. Hans Friedlein (Specialist in Radiology and Neuro-Radiology)
- Dr. med. Karl Scheibl (Specialist in Radiology)
- Stephan Lenhart (Specialist in Radiology, Ultrasound and Interventional Radiology)
- Dr. med. Christa Höring (Specialist in Diagnostic Radiology and General Medicine)
- Dr. med. Andreas Zinkl (Specialist in Diagnostic Radiology and General Medicine)
- MUDr. med. Petr Havranek (Specialist in Radiology)
Specialist areas of treatment

- Diagnostic, imaging methods
- Embolisation
- Radiofrequency treatment
- Vessel-opening procedures (balloon dilatation, stent implantation, thrombectomy, localised lysis)
- Interventional radiology
- CT-guided drainage
- Vessel opening following strokes or occlusions following bleeds
- Treatment of diseases of the peripheral nerves

Head Physician Dr. Bernd Gagel has been in charge of our Department of Radiotherapy and Radio-Oncology since 2008. We offer our patients explanations, advice and radiotherapy treatment for malignant tumours in combination with chemotherapy, hormone therapy and immunotherapy. We also define indications and provide advice and treatment for all benign conditions, chronic joint diseases and tendon insertion inflammations that can be treated with radiotherapy. Since April 2009, patients have been treated as outpatients at the Medical Care Centre. Since June 2010, two of the latest-generation linear accelerators have been used to offer innovative radiotherapy techniques such as IMRT/VMAT, IGRT and radio-surgery.

**Certifications / centres:**

- Certified Radiotherapy Department according to DIN EN ISO 9001
- Certified cooperation partner of the Weiden-Marktredwitz Interdisciplinary Breast Centre, the Weiden Interdisciplinary Prostate Centre, the Hochfranken-Fichtelgebirge Interdisciplinary Prostate Centre and the Nordoberpfalz Interdisciplinary Intestinal Centre

**Team**

The team in our department comprises not only the Head Physician Dr. Bernd Gagel, but also three consultants, one specialist and one clinical assistant, four experts in medical physics, ten MTRAs (internal) and six staff in the reception and secretarial areas.
Specialist areas of treatment

- Local treatment of malignant diseases of organs, tissues or systemic conditions with targeted radiotherapy without or in conjunction with chemotherapy, hormone therapy and immunotherapy
- Iridium afterloading therapy for the endoluminal irradiation of prostatic carcinoma, bronchial carcinoma, oesophageal carcinoma and gynaecological tumours
- Permanent iodine grain implantation to treat prostate carcinoma
- Radiotherapy to treat degenerative and inflammatory joint conditions, calcifications and breast structures

Institute of Radiotherapy and Radio-Oncology

Institute of Nuclear Medicine

Head Physician Dr. med. Johann Schönberger
Specialist in Nuclear Medicine

Nuclear Medicine has been a separate institute at Weiden Hospital since 2008 and is led by Dr. Johann Schönberger. We offer all modern diagnostic nuclear medicine procedures, including PET/CT. We also carry out nuclear medicine-based treatments that are not linked to radio-iodine treatment. To be able to image disease or abnormal metabolic processes in our patients' bodies, we administer medications that are tagged with weakly radioactive substances and visualise their distribution using a gamma camera. Nuclear medicine is used in the context of cancer, heart disease and brain abnormalities, for example. As a central department, we take care of patients who have been admitted to Weiden Hospital and the other hospitals operated by the Kliniken Nordoberpfalz AG group. We also treat outpatients, these being patients with statutory or private insurance, via the affiliated Medical Care Centre in Weiden.

Doctors and physicists at the Institute of Nuclear Medicine

Axel Matthia (Specialist in Diagnostic Radiology) Tel. +49 (0)961 303-2883
MPE Dirk Balzer (Certified Specialist, DGMP) Tel. 0961 303-3457
MPE Graduate Physicist Thomas Eckl (Certified Specialist, DGMP) Tel. +49 (0)961 303-3458
MPE Graduate Physicist Berthold Reichl (Certified Specialist, DGMP) Tel. +49 (0)961 303-3472
Specialist areas of treatment

- All diagnostic procedures involving nuclear medicine (e.g. thyroid, bone, renal and cardiac scintigraphy)
- Nuclear medicine therapy (e.g. radiosynoviorthesis)
- Sentinel lymph node visualisation
- PET/CT-assisted diagnosis

Our department, with eight treatment stations, treats semi-resident patients with acute and chronic pain, regardless of its cause. The department's team therefore includes doctors specialising in anaesthetics, general medicine and neurology as well as therapists from a range of disciplines: psychotherapists, physiotherapists, relaxation trainers, social education workers and specially trained nurses. The first step in the treatment regime is a detailed admission process, while the actual emphasis of treatment lies on a multi-modal pain management programme in groups for adults, the elderly and children.

The Clinic also provides consultations to patients experiencing pain in all of Weiden Hospital's inpatient wards and units and offers the team's skills as part of an interdisciplinary pain conference of registered and practising doctors and psychotherapists. The Clinic also recommends further diagnostic and therapeutic measures, helping to improve pain management for patients in the region.

Senior Physicians in the Interdisciplinary Day Clinic for Pain

Dr. med. Jürgen Altmeppen (Head Physician of the Department of Anaesthesics and Surgical Intensive Care Medicine)
Dr. med. Michael Angerer (Head Physician of the Department of Neurology)
Specialist areas of treatment

- 2-day, in-depth assessment for patients with chronic pain
- Multi-modal pain management programme spanning several weeks for patients with chronic pain of all ages, from children and adolescents to adults and the elderly:
  - Physiotherapy, transcutaneous electrical nerve stimulation, psychotherapy, relaxation techniques, bio-feedback therapy, one-to-one talking therapy, medical support with new drug-based therapy, socio-medical assistance, pain therapy consultation service.

**Interdisciplinary Day Clinic for Pain**

The Weiden Socio-Paediatric Centre (SPC) is one of 18 centres across Bavaria to offer outpatient socio-paediatric care for children with chronic neurological conditions and for children with disabilities or at threat of disability in the northern part of the Upper Palatinate. The centre, which is led by doctors but operates on an interdisciplinary basis with various other professions, is based in terms of its structure on the specifications of Social Security Statute Book V.

In the Socio-Paediatric Centre, children with developmental issues and children with chronic illnesses or disabilities are investigated and, once the diagnostic procedures are complete, offered advice and a holistic treatment concept. Any support needed is also coordinated here. Children are cared for here from the ages of 0 to 18. As well as providing medical and therapeutic care for the patient, families are also supported in coming to terms with their child's condition and managing their everyday lives.

Alongside the work of the highly skilled staff, the very friendly and child-centred amenities in the centre ensure a pleasant experience for children undergoing investigations, while the positive environment also alleviates the worries of parents concerned about their children's health and development. To ensure the prompt diagnosis and comprehensive treatment of children and satisfactory advice for their families, staff at the centre work closely with colleagues within existing networks incorporating paediatric and GP practices, registered therapists, support centres,
authorities and early intervention centres. The Socio-Pediatric Centre therefore complements the established paediatric care in the surrounding practices and through the Department of Paediatrics. To manage this complex task, staff undertake regular further professional training and ensure the uninterrupted care of patients through a quality management process.

**Socio-Pediatric Centre of the Kliniken Nordoberpfalz AG**

**Lead Physician of the Socio-Pediatric Centre:** Dr. med. Susanne Rinnert

**Interdisciplinary team:** Paediatricians specialising in developmental medicine and paediatric neurology, graduate psychologists, occupational therapists, speech therapists, physiotherapists and clinical assistants

Colon Centre of the Nordoberpfalz

In our colon centre, specialists in abdominal surgery, general medicine / gastroenterology, oncology, radiology and radiotherapy, nuclear medicine and pathology work actively together hand in hand. Our common goal is to offer patients with bowel cancer the best possible treatment of the highest clinical standard. The constant advances in surgical techniques, coupled with progress in chemotherapy and radiotherapy, means that our specialists can often avoid the creation of a stoma.

Specialist areas of treatment

- Colonoscopy and endoscopic polyp removal
- Comprehensive diagnostic radiology (including colonography)
- Ultrasound and endo-ultrasound of the upper and lower digestive tract
- Computer tomography
- PET-CT / MRI
- Comprehensive laboratory tests Treatment
- Chemotherapy and radiotherapy
- Stoma reversal
- Stoma creation
- HIPEC and cyto-reductive surgery (peritoneectomy)
- Multi-abdominal resections
- Liver resections
- Lung resections

The high standards of quality are documented through the successful certifications demonstrating compliance with DIN EN ISO 9001:2008 and the Guidelines of the German Cancer Society.
North East Bavarian Perinatal Centre

The Level 1 Perinatal Centre in Amberg and Weiden offers patients the ideal location in which to enjoy care and support not just for normal pregnancies and births, but also for premature babies and high-risk pregnancies. The independent obstetric and neonatal departments with neonatal intensive care unit and appropriately qualified doctors and nurses therefore define the highest possible standard of service and quality for perinatal centres.

With well over 2,800 births in total each year, the departments involved rank among Germany's major obstetric and neonatal facilities. The Amberg-Weiden Perinatal Centre provides highly skilled care close to home for premature and new-born babies in the northern Upper Palatinate region. Shared training and quality assurance projects ensure constant development and the integration of the latest research findings. The concept of a shared perinatal centre, in which specialists from adjoining departments cooperate very intensively, was first established in the North East Bavaria Perinatal Centre. Several other facilities in Bavarian now also work very successfully together in perinatal centre networks.

North East Bavarian Perinatal Centre

Chief Practitioners of the Perinatal Centre in Weiden

Prostate Cancer Centre Nordoberpfalz

The specialist departments of Urology and Radiotherapy are certified as an interdisciplinary prostate cancer centre. The aim of this is to ensure the best possible medical care for patients in our region with prostatic carcinoma. This is achieved through an interdisciplinary committee of experts, which meets once a week in the multi-disciplinary prostate carcinoma clinic and at the multi-disciplinary cancer team conference.

Specialist areas of treatment

- Radical prostatectomy (radical surgery)
- External radiotherapy
- Internal radiotherapy (brachytherapy)
- Palliative chemotherapy and hormone therapy

The high standards of quality are documented through the successful certifications demonstrating compliance with DIN EN ISO 9001:2008 and the Guidelines of the German Cancer Society.
Breast Centre Weiden-Marktredwitz

The Weiden and Marktredwitz (Fichtelgebirge) Departments of Gynaecology work together in the Breast Centre to provide the best possible care of conditions involving the mammary gland: as well as short referral routes and the prompt initiation of therapeutic measures, there is also close cooperation with registered doctors such as gynaecologists, GPs and radiologists. Together, we are here for our patients throughout the course of their illness. Our excellent facilities and tremendous experience means that we can offer the majority of our patients breast-conserving treatment.

Specialist areas of treatment

• Diagnostic procedures with breast ultrasound, etc.
• Stereotactic vacuum biopsies
• Radiological marking
• Tumour surgery
• Plastic surgery
• Systemic therapy
• Radiotherapy
• Nuclear medicine
• Physiotherapy
• Tumour aftercare

The high standards of quality are documented through the successful certifications demonstrating compliance with DIN EN ISO 9001:2008 and the Guidelines of the German Cancer Society.
Regional Trauma Centre

Since 02.10.2009, Weiden Hospital has been certified as a regional trauma centre. Since 01.04.2011 it has been the base for the Christoph 80 rescue helicopter. It has played a key role in providing comprehensive care for accident victims in the northern Upper Palatinate region. Under the guidance of the Department of Trauma Surgery, the trauma centre is brilliantly equipped to care for patients with multiple injuries and treats around 100 seriously injured people a year. The surgical intensive care unit, with 19 intensive care beds, is available for providing onward care for patients, so that the trauma centre is in a constant state of readiness to receive patients who have been injured in accidents of all degrees of seriousness. The successful re-certification and approval as a trauma centre (VAV) by the German Society of Accident Insurers confirms that we offer the best possible care for seriously injured patients.

Specialist areas of treatment

• Care of seriously injured patients and patients with polytrauma
• Surgical treatment of spinal injuries in all regions
• Treatment of complex pelvic and acetabular fractures
• Paediatric traumatology
• Hand, plastic and micro-surgery, reimplantations and free flap plasties

For many years, our department has focused on providing high-quality care to patients with joint problems. To increase patient safety and treatment quality even further, we have established an Endoprosthetics Centre (EPC) at Weiden Hospital. This guarantees that our patients will receive treatment from experienced specialists. We meet the key scientifically supported criteria for providing safe and high-quality medical care to patients undergoing artificial joint replacements in our Endoprosthesis Centre. Our treatment concept includes surgeons with many years' experience who are highly skilled in endoprosthetics, as well as internal and external cooperation partners, to ensure the best possible interdisciplinary collaboration between the various specialisms.

Specialist areas of treatment

- Primary total hip and knee implantation
- Endoprosthetics for soft tissue and bone tumours (modular tumour endoprostheses)
- Replacement operations following loosening or infection
- Special treatment regime for infected endoprostheses

Head of the Endoprosthetic Centre

**Dr. med. Thomas Neubauer-Gartzke**

The future of surgery: modern technology in the OR

Kliniken Nordoberpfalz AG is investing in the future - and therefore in the wellbeing of its patients. New and complex treatment methods require high-quality equipment for the surgeons to use. We are equipped for these challenges with three highly modern operating theatres, allowing us to offer our patients even better care.

Hybrid operating theatre
The modern operating theatre is fully equipped and has additional high-performance imaging technology: a special CT machine and angiography system for imaging blood vessels allow the surgeons to work with absolute precision. The new hybrid operating theatre has a robot-controlled X-ray system that can be positioned very accurately over the patient. It allows angiographies to be performed and 3D images to be taken.

Integrated operating theatre
Through optimised networking, we are able to guarantee a new standard of quality for our operations in the integrated operating theatre thanks to increased interdisciplinary collaboration. The operating theatre equipment is controlled using a touchscreen. The digitised image and video data is available throughout the hospital.

Orthopaedic operating theatre
With an additional orthopaedic operating theatre, we have more space for operations. Waiting times for patients are therefore reduced.
Stroke Unit

A stroke unit with ten treatment stations has been annexed to the Neurology Department since 2003. On this special unit, we treat stroke patients with an interdisciplinary approach: our team comprises doctors from the fields of neurology, cardiology, neuro-radiology and vascular surgery, along with specially trained nursing staff, physiotherapists, occupational therapists and speech therapists as well as rehabilitation advisers. Since every minute counts for stroke patients, we need to be able to weigh up decisions very quickly. Our admission procedure from the patient's arrival in the emergency admissions unit to their onward care on the ward is therefore designed so that there are no delays.

Specialist areas of treatment

- Investigation of brain functions and brain perfusion
- Drug-based treatment to dissolve blood clots
- Mechanical interventional dissolution of blood clots via catheters (neuro-radiology)
- Continuous monitoring of cardiac / circulatory functions
- Specialist nursing, physiotherapy, speech and swallowing therapy, occupational therapy
- Determination and treatment of risk factors

Affiliated ENT Department

In our affiliated department with ten beds, affiliated doctors carry out ear, nose and throat operations at Weiden Hospital. Many of the procedures are performed on an outpatient basis. We carry out longer or more difficult operations as inpatients. Every operation is preceded by a careful examination of our patients with suitable diagnostic investigations in the various ENT practices.

Specialist areas of treatment

- Removal of pharyngeal and palatine tonsils
- Alignment of nasal bone and nasal septum fractures
- Nasal septum straightening and turbinate trimming
- Surgery for snoring
- Endoscopic surgery to the sinuses
- Removal of skin tumours
- Endoscopies and operations
- Surgery to the tympanic membrane
- Aesthetic functional nasal surgery

Affiliated Ophthalmology Department

The affiliated Ophthalmology Department has been in existence since 1960 and is looked after by the AugenAllianz Zentren Nordostbayern Dr. Gamringer und Partner. Both the affiliated ophthalmologists and their assistant personnel have many years of professional experience, have an in-depth knowledge of ophthalmology and are at the cutting edge of their field thanks to constant further training and innovative technologies. This means that we can offer a wide range of ophthalmological treatments and procedures and carry them out professionally both on an inpatient and outpatient basis.

Specialist areas of treatment

- Cataract surgery
- Operative and laser surgical glaucoma treatment
- Correction of squints (strabismus)
- Eyelid and tumour surgery to the eye (e.g. basalioma, ectropion, drooping eyelids)
- Tear duct surgery (e.g. tear duct stenosis)
- Consultations
- Treatment of wet age-related macula degeneration (AMD) through the intravitreal administration of medications (IVOM)

Orthopaedic and Trauma Surgery in Weiden

Joint practice

The doctors at the joint practice for orthopaedics and trauma surgery in Weiden, Dr. Matthias Wiemann, Dr. Eugen Bratzel, Dr. Elmar Baumer and Simon Dobmeier, have been carrying out orthopaedic and trauma surgery procedures at Weiden Hospital since 2014. Johannes Weiß, Orthopaedic and Trauma Surgeon, joined the joint practice as the fifth partner in 2015. It specialises in outpatient and inpatient treatment in the domain of hip and knee endoprosthetics, as well as arthroscopic procedures on the knee and shoulder joints.

Specialist areas of treatment

- Arthroscopic surgery to the knee and shoulder joint
- Meniscal, cartilage and cruciate ligament interventions
- Ganglion removal
- Hand procedures
- Foot surgery
- Hip prostheses
- Knee prostheses

Orthopaedic and Trauma Surgery in Schwandorf

Joint practice

The joint specialists with the "Ortho Docs" have trained in the treatment of diseases and injuries affecting the joints. Experts Dr. M. Hartl, W. Busch and Dr. B. Thürriegl offer state-of-the-art techniques and a high degree of specialisation. Many joint conditions can be treated conservatively with chirotherapy, infiltrations and infusions as well as alternative treatment methods. The emphasis of surgical treatment lies in the endoprosthetic replacement of hip and knee joints, arthroscopic joint surgery and corrective procedures of the forefoot.

Specialist areas of treatment

- Arthroscopic anterior cruciate ligamentoplasty
- Shoulder arthroscopy with tendon suturing, bursa removal
- Knee and ankle arthroscopy
- Artificial hip and knee replacement
- Forefoot surgery

In collaboration with the doctors and our nurses, our physiotherapy treatment creates the ideal conditions for the best possible treatment outcomes in all medical disciplines. We support patients as they improve and restore their normal physical functions and quality of life, for instance after accidents, sporting injuries, neurological conditions, postural and spinal damage and cardiovascular and rheumatological diseases. Treatment often starts on the intensive care unit and is continued on the normal ward. For our young patients in the paediatric department, we have a specially trained team who take care of the support and treatment. Following your discharge, we will be happy to continue supporting you as an outpatient.

Within the Department of Radiotherapy at Weiden Medical Care Centre, MVZ Weiden GmbH, patients with benign and malignant tumours as well as various functional, degenerative and inflammatory conditions are treated on an outpatient basis.

### Treatment for malignant conditions
- Targeted radiation / 3D-conformal radiotherapy
- Intensity-modulated radiotherapy
- Stereotactic radiation
- Iridium after-loading therapy
- Iodine grain implantation
- Radio-oncological quality monitoring

### Treatment for benign conditions:
- Degenerative and inflammatory joint and tendon insertion point conditions
- Calcifications
- Breast structures for planned hormonal therapy for prostatic carcinoma

### Our services
- Thyroid disease
- Cardiac investigations
- Skeletal investigations
- Renal function scintigraphy
- Receptor scintigraphy
- PET/CT
- Nuclear medicine-based treatment

---

**Department of Nuclear Medicine**

As part of the Medical Care Centre in Weiden, MVZ Weiden GmbH, the Institute of Nuclear Medicine carries out all modern nuclear medicine-based examinations and investigations. Thanks to state-of-the-art equipment, the Chief Physician Dr. Schönberger and his team are able to offer the full range of the latest nuclear medicine-based diagnostic procedures.

Department of Oncology

Since April 2012, the Department of Oncology has been part of Weiden Medical Care Centre, MVZ Weiden GmbH. The two experts Robert Funck and Dr. Thomas Schichtl, along with their trained personnel, are specialists in the diagnosis and treatment of all haematological conditions and cancers. The two specialists have also undergone additional training in palliative medicine.

The following diagnoses are treated

- Tumours of all organs
- Diseases of the blood and bone marrow
- Malignant lymph node disease
- Leukaemia

Treatments

- Outpatient immuno- and chemotherapy
- Supportive therapies:
  - Blood transfusion
  - Pain therapy
  - Hormone therapy
  - Administration of immunoglobulins
- Haematological diagnostics including bone marrow aspiration
- Ultrasound-based diagnostics of the lymph nodes, abdomen and retroperitoneum
